The closest prior art, reference Deering (U.S. Patent No. 6,894,698) teaches a graphics system comprising a set of graphics accelerators; and a series of filtering units, wherein each of the graphics accelerators coupled to a corresponding one of the filtering units; wherein each of the graphics accelerators is configured to: generating a stream of samples in response to received graphics primitives; add a corresponding dither value to the color components of the samples to obtain dithered color components; buffer the dithered color components in an internal frame buffer; and forward truncated versions of the dithered color components to the corresponding filtering unit.

However, reference Deering does not teach the above features.
